# About this training

## RIIMPO338D - Conduct Rigid Haul Truck Operations

This Nationally Recognised RIIMPO338D Conduct Rigid Haul Truck Operations training course is the entry level qualification to get a job driving huge dump trucks in the mines or quarries. No matter where you live in Australia - employers recognise this qualification.

You'll learn on big MINE-sized dump trucks - the Caterpillar 773, which is one of the largest training trucks you can drive. The 773 is still widely used in mining operations. This world-class training will prepare you for what lies ahead when you step it up a notch into the 785 and the biggest truck in the Caterpillar range - the enormous 797.

You will be training on a real mine site where you will be assist-ing with removal of overburden, working under the Mining and Quarrying Act.

## This training is as real as it gets

This training will also equip you with the skills and confidence to operate any type of dump truck, including Caterpillar, Leibherr, Hitachi and Komatsu - which are the most commonly used trucks in Australian mines

This course will give you a massive boost when applying for jobs because you can demonstrate time behind the wheel of big dump trucks and the qualification to prove it.

## Entry level jobs

This course is ideal for anyone wishing to gain entry level roles as a Machinery Operator in the mining / quarrying sector.

# Who Can Do This Course?

The training is designed for inexperienced operators who are looking to gain the skills to start as entry-level operators of large mining machinery.

NOTE: If you feel you have some difficulty with English or you are new to the country and you feel like you may have some learning challenges - we can assist with that.

# Requirements

The training course is held close to Brisbane.

You must be 18 years of age.

Hold a driver's licence (a minimum of a preliminary licence or P Plates).

This course is open to men and women.

# The Skills You Will Gain

## Driving Operations

Training on a real mine site

# We'll make you job-ready

## This is what your typical day will look like on site.

At the start of your shift, you'll attend the 'toolbox' talk, where work schedules are discussed and allocated. You will wear personal protective equipment at all times.

Work site inspection and coordinating tasks with other workers makes a more productive shift.

Inspection of the truck is critical, because your safety and the safety of others is the number one priority.

The first steps are to isolate the vehicle, then begin pre-start checks, inspecting the body, tyres, lights etc and report any defects.

Next, you'll enter the vehicle using the standard, safe technique. Once inside the cab, you commence the start-up procedure. Start the engine only when all pre-start checks have been completed to your satisfaction.

Before moving off, survey the terrain and weather conditions; adjust your driving technique to suit throughout your shift. Always drive, manoeuvre, conduct and control the vehicle within its safe operation limits.

You'll continually monitor hazards and risks, ensuring personal safety, safety of others and plant and equipment.

Operations involve accurate positioning of the truck under excavators, shovels etc; where you will also monitor the safe loading of the vehicle.

Dump trucks are complex machines and things can go wrong, therefore you will conduct regular inspections and fault-finding tasks.

Your job is to also act on or report monitoring alarms systems within the vehicle and carry out re-fuelling and prepare for minor scheduled maintenance; keeping accurate written records along the way.

At the end of your shift, you will conduct safe and compliant park-up and shutdown procedures and complete a log of your load, haul and dump activities during the day.

## Plan and prepare

Access, interpret and apply documentation and ensure the work activity is compliant. Obtain, read, interpret, clarify and confirm work requirements. Identify and address potential risks, hazards and environmental issues, and implement control measures.

Select and modify the operating/drive technique to appropriately meet changing work conditions. Drive, manoeuvre, conduct and control operations within the vehicle limitations.

## Operate haul truck

## Load, haul and dump

Position rigid haul truck under loading equipment and load vehicle.  
Carry out approved haulage operations.  
Carry out approved dumping operations.  
Complete load, haul and dump work activity.

Prepare vehicle for maintenance.  
Conduct inspection and fault finding.  
Carry out scheduled maintenance tasks.  
Refuel vehicle.  
Return vehicle to service.  
Process written maintenance records.

## Post-operational procedures

# Course Duration

# 2 Days

## Price

**Book Online**

## Location

**Dinmore, 31km west of Brisbane, Queensland**

## Multi-skilling

Mining is a fast-paced business, you need to be multi-skilled. We see a lot of jobs for operators who are required to drive different types of machinery - it pays to be well-prepared.

## Combining Courses

Each package below is designed to give you maximum time behind the wheel, so you become a proficient operator.

### Bronze Package

- Dump Truck Only  
Min 2 days

### Silver package

- Dump Truck & Standard 11 Induction  
Min 4 days

### Gold package

- Dump Truck & Water Truck Combo  
Min 2 days

### Platinum package

- Dump Truck, Water Truck, Standard 11  
Min 4 DAYS

## Course Availability

Limited spots are available. Don't miss out. Book your training online and we'll call you back with details.
